SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 9/19/2017 9:35:00 AM . The samples were received intact, on-ice within nine sealed coolers at -12.7, -24.7, -15.2, -16.8, -12.1, -20.0, -17.3, -16.4, and -30.2 degrees Celsius.

SAMPLE PREPARATION AND ANALYSIS

The samples were processed following the work instructions provided by the client; EFSR-P-SP-WI11646. All of the samples were defrosted and the tails were then removed from the lobster. The shell was removed, and the meat was weighed, de-veined, and then homogenized before sample prep.

Total solids analysis was performed in accordance with method SM2540B.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B.

The samples were prepped in batch F710238 for % moisture and batch F709418 for total solids. The tail mass was measured in batch F709421.

The samples were prepped in batch F709410 and analyzed in sequence 7I28009 for total Mercury.

Per client request samples 1709490-01 and 1709490-11 were used as the source QC in these batches F710238, F709418, and F709410.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Project: Maine Lobster Special Project 2017
Project Number: 3616166052.04A.055
Project Manager: Denise King

Reported:
07-Oct-17 12:09

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- O-09 Total Solids are prepared at the same time as the preparation for the analyte(s) of interest in order to provide the most accurate dry mass correction.
- O-04 This sample was analyzed outside of the recommended holding time.
- J The result is an estimated concentration.
- F-03 This method blank is an equipment blank created during the homogenization process of associated samples at the laboratory. For informational purposes only.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Reviewer Initials: DM

1. Total Solids

- A. Check for transcription errors from Benchsheet/Raw Data
 - (i) Do sample ID(s) match?
 - (ii) Do masses/volumes match?
 - (iii) Are the analyst name, dataset ID, and preparation date listed?
 - (iv) Does the LIMS benchsheet prep date match the actual prep date?
- B. Does the batch include 1 MD/MT per 10 client samples?
- C. MD RPD/MT RSD ≤ 10%
- D. Are qualifiers, O-04 and O-09, included for samples analyzed out of hold time?

<input type="checkbox"/> Density Only - NA this section

Comments:

¹The same balance must be used to weight samples before and after ovening.

²Samples must be ovened over 12 hours.

³Samples must be re-weighed within 30 minutes of oven cool down.

Peer Review Checklist for Total Solids and Density (SOP5133)

Analyst: AMB

Date: 9/26/17 Reviewer: DM

Date: 9/28/17

WO #: 1709490

Batch #: F709418

Dataset ID: TS170925-4

Reviewer Initials: DM

General Comments/Re-run requirements:

Select	SOP	Method	Matrix
<input checked="" type="checkbox"/>	SOP5133	TS	S/T
<input type="checkbox"/>	SOP5133	Density	Liquids

Initials: AMB SOP Date: 6/2/16

Reviewer Initials: DM

1. Total Solids

- A. Check for transcription errors from Benchsheet/Raw Data
 - (i) Do sample ID(s) match?
 - (ii) Do masses/volumes match?
 - (iii) Are the analyst name, dataset ID, and preparation date listed?
 - (iv) Does the LIMS benchsheet prep date match the actual prep date?
- B. Does the batch include 1 MD/MT per 10 client samples?
- C. MD RPD/MT RSD ≤ 10%
- D. Are qualifiers, O-04 and O-09, included for samples analyzed out of hold time?

Density Only - NA this section

REVISED REPORT (11/14/17)

Report was revised as the narrative in the original report did not include a comment that the % lipids requested on the sample submittal form were cancelled by the client. This has been updated in this revised report.

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 9/19/2017 9:35:00 AM . The samples were received intact, on-ice within nine sealed coolers at -12.7, -24.7, -15.2, -16.8, -12.1, -20.0, -17.3, -16.4, and -30.2 degrees Celsius.

Client requested Lipids Analysis by NOAA1993a on the sample submittal form, but this request was cancelled by the client on 10/6/17.

SAMPLE PREPARATION AND ANALYSIS

The samples were processed following the work instructions provided by the client; EFSR-P-SP-WI11646. All of the samples were defrosted and the tails were then removed from the lobster. The shell was removed, and the meat was weighed, de-veined, and then homogenized before sample prep.

Total solids analysis was performed in accordance with method SM2540B.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B.

The samples were prepped in batch F710239 for % moisture and batch F709439 for total solids. The tail mass was measured in batch F709422.

The samples were prepped in batches F709411 and F710187 for total Mercury. They were analyzed in sequences 7129022 and 7J04013.

Per client request samples 1709491-01 and 1709491-11 were used as the source QC in these batches F710239, F709439, F709411, and F710187.

ANALYTICAL AND QUALITY CONTROL ISSUES

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

AMEC Foster Wheeler
271 Mill Road
Chelmsford MA, 01824Project: Maine Lobster Special Project 2017
Project Number: 3616166052.04A.055
Project Manager: Denise King**Reported:**
14-Nov-17 15:06

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- QR-08 The RPD value for the MS/MSD was outside of acceptance limits. Batch QC acceptable based on matrix duplicate and/or LCS/LCSD RPD values within control limits.
- QM-02 The MS and/or MSD recoveries outside acceptance limits, due to spike concentration less than 1 times the sample concentration. The batch was accepted based on LCS and LCSD recoveries within control limits and, when analysis permits, acceptable AS/ASD.
- O-04 This sample was analyzed outside of the recommended holding time.
- J The result is an estimated concentration.
- F-03 This method blank is an equipment blank created during the homogenization process of associated samples at the laboratory. For informational purposes only.
- E The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
- AS This MS and/or MSD is an analytical spike and/or an analytical spike duplicate.
- AD This matrix duplicate is an analytical duplicate.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Peer Review Checklist for Total Solids and Density (SOP5133)

Analyst: WF, DH

Date: 9/29/17

Reviewer: DM

Date: 9/27/17

WO #: 1709491

Batch #: F709422

Dataset ID: F709422

Reviewer Initials: DM

General Comments/Re-run requirements:

Select	SOP	Method	Matrix
<input checked="" type="checkbox"/>	SOP5133	TS	S/T
<input type="checkbox"/>	SOP5133	Density	Liquids

Initials	SOP Date	
<u>WF</u>	<u>5/9/17</u>	<input checked="" type="checkbox"/>
<u>DH</u>	<u>12/13/16</u>	<input checked="" type="checkbox"/>

Reviewer Initials: DM

1. Total Solids

- A. Check for transcription errors from Benchsheet/Raw Data
 - (i) Do sample ID(s) match?
 - (ii) Do masses/volumes match?
 - (iii) Are the analyst name, dataset ID, and preparation date listed?
 - (iv) Does the LIMS benchsheet prep date match the actual prep date?
- B. Does the batch include 1 MD/MT per 10 client samples?
- C. MD RPD/MT RSD ≤ 10%
- D. Are qualifiers, O-04 and O-09, included for samples analyzed out of hold time?

Density Only - NA this section

Comments:

¹The same balance must be used to weight samples before and after ovening.

²Samples must be ovened over 12 hours.

³Samples must be re-weighed within 30 minutes of oven cool down.

Preparation Date: Sep 26, 2017

Batch #: 2

1. Total Solids

- A. Check for transcription errors from Benchsheet/Raw Data
 - (i) Do sample ID(s) match?
 - (ii) Do masses/volumes match?
 - (iii) Are the analyst name, dataset ID, and preparation date listed?
 - (iv) Does the LIMS benchsheet prep date match the actual prep date?
- B. Does the batch include 1 MD/MT per 10 client samples?
- C. MD RPD/MT RSD ≤ 10%
- D. Are qualifiers, O-04 and O-09, included for samples analyzed out of hold time?

Density Only - NA this section

|--|--|-------------------------------|---|
| 20. MS/MSD Spiked at least 1-5 X ambient or 5x MRL (whichever is higher) ? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| Comments: _____ | | | |
| 21. Are all samples within instrument calibration range? (or at minimum dilution size) | <input checked="" type="checkbox"/> PASS | <input type="checkbox"/> FAIL | <input checked="" type="checkbox"/> |
| Comments: _____ | | | |
| 22. Are the samples run at the correct dilution level for the method? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| Comments: _____ | | | |
| 23. Dissolved < Total (if applicable) | <input type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| Comments: _____ | | | |
| 24. Effluent < Influent (visually confirm if needed) | <input type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| Comments: _____ | | | |
| 25. Are re-runs noted with reason? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| Comments: _____ | | | |
| 26. FSTM Datasets: Check to ensure the 'Response' & 'Initial Result' columns match in both the Excel dataset & LIMS for the FSTM A (in sequence) & B/C (in batch) traps? | <input type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| Comments: _____ | | | |
| 27. Is the B trap <5% A Traps | <input type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| Comments: _____ | | | |
| 28. Are spiked trap recoveries 75-125% of true value? | <input type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| Comments: _____ | | | |
| 29. Have non-reportable samples been imported into LIMS and clicked to non-reportable? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| Comments: _____ | | | |
| 30. Have re-extracts been created for non-reportable samples? | <input type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| 31. Are there any HIGH QA projects within the data? If so, place data package in QA office before scanning. | <input type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| 32. Does the data set need scanning? | <input type="checkbox"/> YES | | <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| 33. Does the dataset have an LOQ/LOQ or DOC? | <input type="checkbox"/> YES | | <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| 34. Water samples: has the preservation log been included in dataset for final volume verification? | <input type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| 35. Water samples-is the final volume correct in the sequence? | <input type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> |

REVISED REPORT (11/14/17)

Report was revised as the narrative in the original report did not include a comment that the % lipids requested on the sample submittal form were cancelled by the client. This has been updated in this revised report.

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 9/19/2017 9:35:00 AM . The samples were received intact, on-ice within nine sealed coolers at -12.7, -24.7, -15.2, -16.8, -12.1, -20.0, -17.3, -16.4, and -30.2 degrees Celsius.

Client requested Lipids Analysis by NOAA1993a on the sample submittal form, but this request was cancelled by the client on 10/6/17.

SAMPLE PREPARATION AND ANALYSIS

The samples were processed following the work instructions provided by the client; EFSR-P-SP-WI11646. All of the samples were defrosted and the tails were then removed from the lobster. The shell was removed, and the meat was weighed, de-veined, and then homogenized before sample prep.

Total solids analysis was performed in accordance with method SM2540B.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B.

The samples were prepped in batch F710240 for % moisture and batch F709440 for total solids. The tail mass was measured in batch F709423.

The samples were prepped in batch F709412 and analyzed in sequence 7I29015 for total Mercury.

Per client request samples 1709492-01 and 1709492-11 were used as the source QC in these batches F710240, F709440, and F709412.

ANALYTICAL AND QUALITY CONTROL ISSUES

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

AMEC Foster Wheeler
271 Mill Road
Chelmsford MA, 01824Project: Maine Lobster Special Project 2017
Project Number: 3616166052.04A.055
Project Manager: Denise King**Reported:**

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Amy Goodall, Project Manager

Reviewer Initials: DM

1. Total Solids

- A. Check for transcription errors from Benchsheet/Raw Data
 - (i) Do sample ID(s) match?
 - (ii) Do masses/volumes match?
 - (iii) Are the analyst name, dataset ID, and preparation date listed?
 - (iv) Does the LIMS benchsheet prep date match the actual prep date?
- B. Does the batch include 1 MD/MT per 10 client samples?
- C. MD RPD/MT RSD ≤ 10%
- D. Are qualifiers, O-04 and O-09, included for samples analyzed out of hold time?

Density Only - NA this section

1. Total Solids

- A. Check for transcription errors from Benchsheet/Raw Data
 - (i) Do sample ID(s) match?
 - (ii) Do masses/volumes match?
 - (iii) Are the analyst name, dataset ID, and preparation date listed?
 - (iv) Does the LIMS benchsheet prep date match the actual prep date?
- B. Does the batch include 1 MD/MT per 10 client samples?
- C. MD RPD/MT RSD ≤ 10%
- D. Are qualifiers, O-04 and O-09, included for samples analyzed out of hold time?

Density Only - NA this section

REVISED REPORT (11/14/17)

Report was revised as the narrative in the original report did not include a comment that the % lipids requested on the sample submittal form were cancelled by the client. This has been updated in this revised report.

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 9/19/2017 9:35:00 AM . The samples were received intact, on-ice within nine sealed coolers at -12.7, -24.7, -15.2, -16.8, -12.1, -20.0, -17.3, -16.4, and -30.2 degrees Celsius.

Client requested Lipids Analysis by NOAA1993a on the sample submittal form, but this request was cancelled by the client on 10/6/17.

SAMPLE PREPARATION AND ANALYSIS

The samples were processed following the work instructions provided by the client; EFSR-P-SP-WI11646. All of the samples were defrosted and the tails were then removed from the lobster. The shell was removed, and the meat was weighed, de-veined, and then homogenized before sample prep.

Total solids analysis was performed in accordance with method SM2540B.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B.

The samples were prepped in batch F710241 for % moisture and batch F709441 for total solids. The tail mass was measured in batch F709425.

The samples were prepped in batch F709414 and analyzed in sequence 7I28013 for total Mercury.

Per client request samples 1709493-01 and 1709493-11 were used as the source QC in these batches F710241, F709441, and F709414.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

AMEC Foster Wheeler
271 Mill Road
Chelmsford MA, 01824

Project: Maine Lobster Special Project 2017
Project Number: 3616166052.04A.055
Project Manager: Denise King

Reported:
14-Nov-17 15:16

method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- O-04 This sample was analyzed outside of the recommended holding time.
- F-03 This method blank is an equipment blank created during the homogenization process of associated samples at the laboratory. For informational purposes only.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

		<input checked="" type="checkbox"/>

Reviewer Initials: DM

1. Total Solids

- A. Check for transcription errors from Benchsheet/Raw Data
 - (i) Do sample ID(s) match?
 - (ii) Do masses/volumes match?
 - (iii) Are the analyst name, dataset ID, and preparation date listed?
 - (iv) Does the LIMS benchsheet prep date match the actual prep date?
- B. Does the batch include 1 MD/MT per 10 client samples?
- C. MD RPD/MT RSD ≤ 10%
- D. Are qualifiers, O-04 and O-09, included for samples analyzed out of hold time?

Reviewer Initials: DM

1. Total Solids

- A. Check for transcription errors from Benchsheet/Raw Data
 - (i) Do sample ID(s) match?
 - (ii) Do masses/volumes match?
 - (iii) Are the analyst name, dataset ID, and preparation date listed?
 - (iv) Does the LIMS benchsheet prep date match the actual prep date?
- B. Does the batch include 1 MD/MT per 10 client samples?
- C. MD RPD/MT RSD ≤ 10%
- D. Are qualifiers, O-04 and O-09, included for samples analyzed out of hold time?

REVISED REPORT (11/14/17)

Report was revised as the narrative in the original report did not include a comment that the % lipids requested on the sample submittal form were cancelled by the client. This has been updated in this revised report.

SAMPLE RECEIPT

Samples arrived in two shipments.

The first half of the samples were received at Eurofins Frontier Global Sciences (EFGS) on 9/19/2017 9:35:00 AM . The samples were received intact, on-ice within nine sealed coolers at -12.7, -24.7, -15.2, -16.8, -12.1, -20.0, -17.3, -16.4, and -30.2 degrees Celsius.

The second half of the samples were received at Eurofins Frontier Global Sciences (EFGS) on 9/22/2017 10:25:00 AM . The samples were received intact, on-ice within a sealed cooler at -3.1 degrees Celsius.

Client requested Lipids Analysis by NOAA1993a on the sample submittal form, but this request was cancelled by the client on 10/6/17.

SAMPLE PREPARATION AND ANALYSIS

The samples were processed following the work instructions provided by the client; EFSR-P-SP-WI11646. All of the samples were defrosted and the tails were then removed from the lobster. The shell was removed, and the meat was weighed, de-veined, and then homogenized before sample prep.

Total solids analysis was performed in accordance with method SM2540B.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B.

The samples were prepped in batch F710242 for % moisture and batch F709456 for total solids. The tail mass was measured in batch F710234.

The samples were prepped in batch F709455 and analyzed in sequence 7I29022 for total Mercury.

Per client request samples 1709632-01 and 1709632-07 were used as the source QC in these batches F710242, F709456, and F709455.

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Amy Goodall, Project Manager

Sample Receipt Checklist

Client: AMEC Foster Wheeler

Date & Time Received: 9/22/17 10:25 Date Labeled: 9/25/17 Labeled By: LM

Project: _____

Received By: LM Label Verified By: JCL

of Coolers Received: 1 Samples Arrived By: Shipping Service _____ Courier _____ Hand _____ Other (Specify: _____)

Coolant: None/Ambient Loose Ice Gel Ice Dry Ice Coolant Required: (Y)N Temp Blank Used: (Y)N for Cooler(s): _____

Notify Project Manager if packages/coolers are received without coolant or with thawed coolant and at a temperature in excess of 6°C. PM notified: Y/N

Cooler Information:	Y/N/NA	Comments
The coolers do not appear to be tampered with:	<u>Y</u>	
Custody Seals are present and intact:	<u>N</u>	
Custody seals signed:	<u>N</u>	

TID: <u>43150</u>	CF: <u>+0.2 °C</u>	Date/time: <u>9/22/17 0:30</u>	By: <u>LM</u>

Project: Maine Lobster Special Project 2017
Project Number: 3616166052.04A.055
Project Manager: Denise King

Reported:
14-Nov-17 15:21

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- QM-02 The MS and/or MSD recoveries outside acceptance limits, due to spike concentration less than 1 times the sample concentration. The batch was accepted based on LCS and LCSD recoveries within control limits and, when analysis permits, acceptable AS/ASD.
- O-09 Total Solids are prepared at the same time as the preparation for the analyte(s) of interest in order to provide the most accurate dry mass correction.
- O-04 This sample was analyzed outside of the recommended holding time.
- J The result is an estimated concentration.
- F-03 This method blank is an equipment blank created during the homogenization process of associated samples at the laboratory. For informational purposes only.
- E The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
- AS This MS and/or MSD is an analytical spike and/or an analytical spike duplicate.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Reviewer Initials: *R*

1. Total Solids

- A. Check for transcription errors from Benchsheet/Raw Data
 - (i) Do sample ID(s) match?
 - (ii) Do masses/volumes match?
 - (iii) Are the analyst name, dataset ID, and preparation date listed?
 - (iv) Does the LIMS benchsheet prep date match the actual prep date?
- B. Does the batch include 1 MD/MT per 10 client samples?
- C. MD RPD/MT RSD ≤ 10%
- D. Are qualifiers, O-04 and O-09, included for samples analyzed out of hold time?

Density Only - NA this section

Comments:

¹The same balance must be used to weight samples before and after ovening.
²Samples must be ovened over 12 hours.
³Samples must be re-weighed within 30 minutes of oven cool down.

1. Total Solids

- A. Check for transcription errors from Benchsheet/Raw Data
 - (i) Do sample ID(s) match?
 - (ii) Do masses/volumes match?
 - (iii) Are the analyst name, dataset ID, and preparation date listed?
 - (iv) Does the LIMS benchsheet prep date match the actual prep date?
- B. Does the batch include 1 MD/MT per 10 client samples?
- C. MD RPD/MT RSD ≤ 10%
- D. Are qualifiers, O-04 and O-09, included for samples analyzed out of hold time?

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 9/22/2017 10:25:00 AM. The samples were received intact, on-ice within two sealed coolers at -27.1 and -21.6 degrees Celsius.

Client requested Lipids Analysis by NOAA 1993a on the sample submittal form, but this request was cancelled by the client on 10/6/17.

SAMPLE PREPARATION AND ANALYSIS

Tissue samples were homogenized per client specific work instructions; EFSR-P-SP-WI11642.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B (EFGS SOP2822).

Samples were prepped in two batches; F710204 and F710207. Per client request, sample 1709617-01 was used as the QC source in batch F710207. These samples were analyzed in sequences 7J09010 and 7J09011.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries.

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- J The result is an estimated concentration.
- F-03 This method blank is an equipment blank created during the homogenization process of associated samples at the laboratory. For informational purposes only.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

|---|---|--|-------------------------------------|
| 1. Compare SampleID with Benchsheet/Sequence/Raw Data (Have all samples been imported?) | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| 2. Check for transcription errors from Excel spreadsheet (or Prep Benchsheet)/Raw data | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (a) On raw data (instrument print-out), does correct file (dataset ID#) name appear in description? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| Naming convention: THg26001-yymmdd-1 or THg26002-yymmdd-1 | | | |
| (b) Check 5% of transcription from Instrument print-out and Excel file | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| Compare the "Dilute" and "Peak (raw)" columns to "Dilution" and "Uncorrected Result" in Excel | | | |
| (c) Check standards & reagents in sequence & bench sheet for correct usage (expiries). | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A |
| (d) Check and compare masses (review prep benchsheet) | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A |
| (e) Check & compare initial & final volumes | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A |
| (f) Do aliquots and dilutions written on benchsheet match those in Excel? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A |
| 50 ml / aliquot = Excel dilution value | | | |
| (g) Is the sequence #, analyst, date, and instrument # on the QC page? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (h) Is the analysis status correct? (analyzed/initial review/reviewed) | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (i) Original prep bench sheet added to data package? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (j) Benchsheet prep date MUST match actual prep date (check if re-shot vs re-extract) | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| 3. High QA? WO#(s)/Client(s): _____ | <input type="checkbox"/> YES | <input checked="" type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| 4. Client specific QC? (if Yes, refer to Project Notes/LIMS) | <input type="checkbox"/> YES | <input checked="" type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (a) Have the QC requirements been met for all WO#s? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (b) Prep blanks corrections/assigned properly | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| 5a. 20 or fewer samples in batch? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (i) 3 PBs, 1 LCS(or BS), 1 LCSD(or BSD), 1 DUP/Batch 1 MS/MSD (or AS/ASD)/10 samples? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (ii) 1 CCV and 1 CCB every 10 analytical runs? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 9/22/2017 10:15:00 AM. The samples were received intact, on-ice within two sealed coolers at -27.1 and -21.6 degrees Celsius.

Client requested Lipids Analysis by NOAA1993a on the sample submittal form, but this request was cancelled by the client on 10/6/17.

SAMPLE PREPARATION AND ANALYSIS

Tissue samples were homogenized per client specific work instructions; EFSR-P-SP-WI11642.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B (EFGS SOP2822).

Samples were prepped in batch F710214. Samples 1709618-01 and 1709618-02 were used as the QC source in batch F710214. These samples were analyzed in sequences 7J16015 and 7J16021.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries.

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- J The result is an estimated concentration.
- F-03 This method blank is an equipment blank created during the homogenization process of associated samples at the laboratory. For informational purposes only.
- E-01 Sample was preceded by a sample exceeding the calibration curve and was reanalyzed for confirmation.
- E The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 9/22/2017 10:25:00 AM. The samples were received intact, on-ice within two sealed coolers at -27.1 and -21.6 degrees Celsius.

Client requested Lipids Analysis by NOAA 1993a on the sample submittal form, but this request was cancelled by the client on 10/6/17.

SAMPLE PREPARATION AND ANALYSIS

Tissue samples were homogenized per client specific work instructions; EFSR-P-SP-WI11642.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B (EFGS SOP2822).

Samples were prepped in two batches; F710214 and F710215. Samples 1709619-06 and 1709619-07 were used as the QC source in batch F710215. These samples were analyzed in three sequences; 7J16015, 7J16021, and 7J18020.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- J The result is an estimated concentration.
- F-03 This method blank is an equipment blank created during the homogenization process of associated samples at the laboratory. For informational purposes only.
- E-01 Sample was preceded by a sample exceeding the calibration curve and was reanalyzed for confirmation.
- E The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

13. Are the individual Preparation Blanks < PQL or <2.2xMDL for WI (refer to appropriate prep method PQL list) PASS FAIL
 (a) If not < PQL or <2.2xMDL for WI, note which PB(s) are above control limit:
 (b) Is the mean PB < PQL or <2.2xMDL for WI (for appropriate qualification)? YES NO
 (c) Was a BrCl Blank analyzed for each preservation level? YES NO N/A
 (d) Are Preparation Blanks summarized on QC page? YES NO
14. Filtration Blank Prepared (if yes, use FB qualifier) YES NO
 (a) Filtration Blank prep date same as associated samples' prep date YES NO N/A
 (b) Filtration Blank absolute value < PQL or <2.2xMDL for WI YES NO N/A
15. IBLs (3 minimum) individually < 0.50 ng/L, mean < 0.25 ng/L and STD of 0.10 ng/L? PASS FAIL
 Comments: _____
16. CCBs individually < 0.50 ng/L or 2.2 x MDL for WI? PASS FAIL
 Comments: _____
17. Have Total Solids been applied? (If NO, please ensure that they are done or nearly done) YES NO N/A
18. Is the correct 'Source' designated for MD/MS/MSD? YES NO
19. For digested preps: was there a spike witness signature & date on the prep bench sheet? YES NO N/A

|--|-------------------|------------|-----------------|----------|
1. Is any SOP/DOC expiring within one week of Submission Date? YES NO
 - Data cannot be reported without a current IDOC/CDOC. If YES, notify supervisor and technician immediately.**
 2. Check prep method YES
 - (a) For Ceuticals: Is correct Hg code being used in LIMS? ICPMS CV-AFS 70:30 N/A
 3. Compare sample ID with benchsheet YES N/A
 4. Verify time of submission? (if not met please explain in the comments) YES N/A
 - (a) Oven bomb - digestion start time before 14:00? YES N/A
 - (b) Microwave - submitted to the lab before 16:00? YES N/A
 5. Check for transcription errors from benchsheet YES
 - (a) Check and compare initial and final volumes YES N/A
 - (b) Check and compare mass YES N/A
 - (c) Has the number of pills been documented (benchsheet and LIMS)? YES N/A
 - (d) Benchsheet prep date MUST match actual prep date YES N/A
 6. Samples per Batch? **Check QC Requirements** ≤ 20 ≤ 10
 - (a) PBs per batch? 3 PBs 2 PB 1 PB
 - (b) BS, BS/BSD or CRM in batch? BS BS/BSD CRM
 - (c) MS/MSD in batch? YES N/A
 - (d) MD in batch? YES N/A
 - (e) Client specific WO #'s: _____ YES N/A
 - (f) Are there any client specific requests and/or alterations? YES N/A
 - Document: _____
 - (g) Correct LIMS spike ID included for BS, BS/BSD and/or MS/MSD? YES N/A
 - (h) Correct 'source' designated for MD/MS/MSD? YES N/A
 - (i) For EFGS-filtered samples, was a filtration blank included? YES N/A
 7. Are the samples appropriately spiked? YES N/A
 - (a) Is the spike and amount used appropriate and entered into LIMS? YES N/A
 - (b) For IDOCs, was there a spike witness? (initials must be in logbook) YES N/A
 - (c) Spikes added: YES N/A

NOTE: Due to LIMS software constraints, new LIMS IDs need to be created when multiple/ supplemental spikes are used. Enter new LIMS ID below and use table to list all spikes included in it.

Spike LIMS ID : 1705879

Reported:
21-Oct-17 13:58

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 9/22/2017 10:25:00 AM . The samples were received intact, on-ice within two sealed coolers at -27.1 and -21.6 degrees Celsius.

Client requested Lipids Analysis by NOAA1993a on the sample submittal form, but this request was cancelled by the client on 10/6/17.

EFGS was unable to locate sample 1709620-05 after the sample was homogenized. Client was notified and the sample was cancelled in this work order. The QA group has started an investigation and will release a report (IR-2017-057) once they are complete.

SAMPLE PREPARATION AND ANALYSIS

Tissue samples were homogenized per client specific work instructions; EFSR-P-SP-WI11642.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B (EFGS SOP2822).

Samples were prepped in two batches; F710215 and F710226. Sample 1709620-06 was used as the QC source in batch F710226. These samples were analyzed in two sequences; 7J18020 and 7J10017.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

AMEC Foster Wheeler

Project Number: 3616166052.04A.055
Project Manager: Denise King

Reported:
21-Oct-17 13:58

duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- QR-07 The RPD/RSD value for the matrix duplicate/triplicate was outside of acceptance limits. Batch QC acceptable based on MS/MSD and/or LCS/LCSD RPD values within control limits.
- J The result is an estimated concentration.
- F-03 This method blank is an equipment blank created during the homogenization process of associated samples at the laboratory. For informational purposes only.
- AD This matrix duplicate is an analytical duplicate.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

| 7. The calibration curve included a minimum of 5 Standards | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | | <input checked="" type="checkbox"/> |
| Comments: _____ | | | | |
| 8. 1st Calibration Standard % Recoveries EPA 1631E (75-125%) | <input checked="" type="checkbox"/> PASS | <input type="checkbox"/> FAIL | | <input checked="" type="checkbox"/> |
| 9. ICV and CCV % Recoveries EPA 1631E (77-123%) | <input checked="" type="checkbox"/> PASS | <input type="checkbox"/> FAIL | | <input checked="" type="checkbox"/> |
| Comments: _____ | | | | |
| 10. Do all calibration points pass acceptance criteria? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | | <input checked="" type="checkbox"/> |
| Comments: _____ | | | | |
| 11. Are qualifiers consistent with the data review flowcharts? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A | <input checked="" type="checkbox"/> |
| Comments: _____ | | | | |
| 12. Explain any items on the failed data report from Element | | | | <input checked="" type="checkbox"/> |
| Comments: _____ | | | | |
| 13. Are the individual Preparation Blanks < PQL or <2.2xMDL for WI (refer to appropriate prep method PQL list) | <input checked="" type="checkbox"/> PASS | <input type="checkbox"/> FAIL | | <input checked="" type="checkbox"/> |
| (a) If not < PQL or <2.2xMDL for WI, note which PB(s) are above control limit: | | | | |
| (b) Is the mean PB < PQL or <2.2xMDL for WI (for appropriate qualification)? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | | <input checked="" type="checkbox"/> |
| (c) Was a BrCl Blank analyzed for each preservation level? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A | <input checked="" type="checkbox"/> |
| (d) Are Preparation Blanks summarized on QC page? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | | <input checked="" type="checkbox"/> |
| 14. Filtration Blank Prepared (if yes, use FB qualifier) | <input type="checkbox"/> YES | <input checked="" type="checkbox"/> NO | | <input checked="" type="checkbox"/> |
| (a) Filtration Blank prep date same as associated samples' prep date | <input type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> N/A | <input checked="" type="checkbox"/> |
| (b) Filtration Blank absolute value < PQL or <2.2xMDL for WI | <input type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> N/A | <input checked="" type="checkbox"/> |
| 15. IBLs (3 minimum) individually < 0.50 ng/L, mean < 0.25 ng/L and STD of 0.10 ng/L? | <input checked="" type="checkbox"/> PASS | <input type="checkbox"/> FAIL | | <input checked="" type="checkbox"/> |
| Comments: _____ | | | | |
| 16. CCBs individually < 0.50 ng/L or 2.2 x MDL for WI? | <input checked="" type="checkbox"/> PASS | <input type="checkbox"/> FAIL | | <input checked="" type="checkbox"/> |
| Comments: _____ | | | | |
| 17. Have Total Solids been applied? (If NO, please ensure that they are done or nearly done) | <input type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> N/A | <input checked="" type="checkbox"/> |
| 18. Is the correct 'Source' designated for MD/MS/MSD? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | | <input checked="" type="checkbox"/> |
| 19. For digested preps: was there a spike witness signature & date on the prep bench sheet? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A | <input checked="" type="checkbox"/> |

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 9/22/2017 10:25:00 AM . The samples were received intact, on-ice within two sealed coolers at -27.1 and -21.6 degrees Celsius.

Client requested Lipids Analysis by NOAA1993a on the sample submittal form, but this request was cancelled by the client on 10/6/17.

SAMPLE PREPARATION AND ANALYSIS

Tissue samples were homogenized per client specific work instructions; EFSR-P-SP-WI11642.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B (EFGS SOP2822).

Samples were prepped in batch F710226 and analyzed in Sequence 7J10017. There were no client requested samples for the source QC in this work order.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Project: 2017 Penobscot Biota
Project Number: 3616166052.04A.055
Project Manager: Denise King

Reported:
13-Oct-17 13:07

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

REVISED REPORT (8/18/17)

Report was revised per client request. The original report mistakenly had the batch that sample 1706933-06 was prepped in as F707327. It was actually prepped in batch F707328. This has been corrected in the narrative. The original report is also missing the results for F707328-Dup1. This is included in the revised report.

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 6/30/2017 9:50:00 AM . The samples were received intact, on-ice within a sealed cooler at -33.8 degrees Celsius.

The sample ID for 1706933-03 was corrected by the client as the chain of custody was incorrect.

SAMPLE PREPARATION AND ANALYSIS

Tissue samples were homogenized per work instructions EFSR-P-SP-WI11642 (eff date 11/23/16) prior to digestion.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B (EFGS SOP2822).

Samples were prepped in two batches; F707327 and F707328. They were analyzed in sequence 7G14006. Per client request, sample 1706933-06 was used as the source QC for the Matrix Spike (MS) and Matrix Spike Duplicate (MSD) in batch F707328.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Project: 2017 Penobscot Biota
Project Number: 2017 Penobscot Biota
Project Manager: Denise King

Reported:
18-Aug-17 17:13

duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Chelmsford MA, 01824Project: 2017 Penobscot Biota
Project Number: 2017 Penobscot Biota
Project Manager: Denise King**Reported:**
18-Aug-17 17:13**Notes and Definitions**

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- QR-07 The RPD/RSD value for the matrix duplicate/triplicate was outside of acceptance limits. Batch QC acceptable based on MS/MSD and/or LCS/LCSD RPD values within control limits.
- J The result is an estimated concentration.
- E-01 Sample was preceded by a sample exceeding the calibration curve and was reanalyzed for confirmation.
- E The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
- AS This MS and/or MSD is an analytical spike and/or an analytical spike duplicate.
- AD This matrix duplicate is an analytical duplicate.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Analysis Datasheet for Total Mercury

Date of Analysis: July 13, 2017
 Instrument #: Hg2600-3
 ITMS Sequence #: 7G14006, 7G14007

Analyst Initials: DMReviewer Initials: BC

1. Compare SampleID with Benchsheet/Sequence/Raw Data (Have all samples been imported?) YES NO
2. Check for transcription errors from Excel spreadsheet (or Prep Benchsheet)/Raw data YES NO
 - (a) On raw data (instrument print-out), does correct file (dataset ID#) name appear in description? YES NO

Naming convention: THg26001-yyymmdd-1 or THg26002-yyymmdd-1
 - (b) Check 5% of transcription from Instrument print-out and Excel file. YES NO

Compare the "Dilute" and "Peak (raw)" columns to "Dilution" and "Uncorrected Result" in Excel
 - (c) Check standards & reagents in sequence & bench sheet for correct usage (expiration). YES NO N/A
 - (d) Check and compare masses (review prep benchsheet) YES NO N/A
 - (e) Check & compare initial & final volumes YES NO N/A
 - (f) Do aliquots and dilutions written on benchsheet match those in Excel? YES NO N/A

50 ml / aliquot = Excel dilution value
 - (g) Is the sequence #, analyst, date, and instrument # on the QC page? YES NO
 - (h) Is the analysis status correct? (analyzed/initial review/reviewed) YES NO
 - (i) Original prep bench sheet added to data package? YES NO
 - (j) Benchsheet prep date MUST match actual prep date (check if re-shot vs re-extract) YES NO
3. High QA? WO#(s)/Client(s): _____ YES NO
4. Client specific QC? (if Yes, refer to Project Notes/LIMS) YES NO
 - (a) Have the QC requirements been met for all WO#s? YES NO
 - (b) Prep blanks corrections/assigned properly YES NO
- 5a. 20 or fewer samples in batch? YES NO
 - (i) 3 PBs, 1 LCS(or BS), 1 LCSD(or BSD), 1 DUP/Batch 1 MS/MSD (or AS/ASD)/10 samples? YES NO
 - (ii) 1 CCV and 1 CCB every 10 analytical runs? YES NO

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 6/30/2017 9:50:00 AM . The samples were received intact, on-ice within a sealed cooler at -33.8 degrees Celsius.

SAMPLE PREPARATION AND ANALYSIS

Tissue samples were homogenized per work instructions EFSR-P-SP-WI11642 (eff date 11/23/16) prior to digestion.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B (EFGS SOP2822).

Samples were prepped in two batches; F707328 and F707329. They were analyzed in sequences 7G14006 and 7G18008. Per client request, sample 1706935-01 was used as the source QC for the Matrix Spike (MS) and Matrix Spike Duplicate (MSD) in batch F707329.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- QR-08 The RPD value for the MS/MSD was outside of acceptance limits. Batch QC acceptable based on matrix duplicate and/or LCS/LCSD RPD values within control limits.
- QR-07 The RPD/RSD value for the matrix duplicate/triplicate was outside of acceptance limits. Batch QC acceptable based on MS/MSD and/or LCS/LCSD RPD values within control limits.
- J The result is an estimated concentration.
- E-01 Sample was preceded by a sample exceeding the calibration curve and was reanalyzed for confirmation.
- E The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
- AS This MS and/or MSD is an analytical spike and/or an analytical spike duplicate.
- AD This matrix duplicate is an analytical duplicate.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

1. Compare SampleID with Benchsheet/Sequence/Raw Data (Have all samples been imported?) YES NO
2. Check for transcription errors from Excel spreadsheet (or Prep Benchsheet)/Raw data YES NO
- (a) On raw data (instrument print-out), does correct file (dataset ID#) name appear in description? YES NO
- Naming convention: THG26001-yyymmdd-1 or THG26002-yyymmdd-1
- (b) Check 5% of transcription from Instrument print-out and Excel file. YES NO
- Compare the "Dilute" and "Peak (raw)" columns to "Dilution" and "Uncorrected Result" in Excel
- (c) Check standards & reagents in sequence & bench sheet for correct usage (expiration). YES NO N/A
- (d) Check and compare masses (review prep benchsheet) YES NO N/A
- (e) Check & compare initial & final volumes YES NO N/A
- (f) Do aliquots and dilutions written on benchsheet match those in Excel? YES NO N/A
- 50 ml / aliquot = Excel dilution value
- (g) Is the sequence #, analyst, date, and instrument # on the QC page? YES NO
- (h) Is the analysis status correct? (analyzed/initial review/reviewed) YES NO
- (i) Original prep bench sheet added to data package? YES NO
- (j) Benchsheet prep date MUST match actual prep date (check if re-shot vs re-extract) YES NO
3. High QA? WO#(s)/Client(s): _____ YES NO
4. Client specific QC? (if Yes, refer to Project Notes/LIMS) YES NO
- (a) Have the QC requirements been met for all WO#s? YES NO
- (b) Prep blanks corrections/assigned properly YES NO
- 5a. 20 or fewer samples in batch? YES NO
- (i) 3 PBs, 1 LCS(or BS), 1 LCSD(or BSD), 1 DUP/Batch 1 MS/MSD (or AS/ASD)/10 samples? YES NO
- (ii) 1 CCV and 1 CCB every 10 analytical runs? YES NO

- 5b. Has the B/C section data been uploaded? YES NO N/A
- QA/QC Data Checked**
6. RSD CF ($\leq 15\%$) PASS FAIL
 Comments: _____
7. The calibration curve included a minimum of 5 Standards YES NO
 Comments: _____
8. 1st Calibration Standard % Recoveries EPA 1631E (75-125%) PASS FAIL
9. ICV and OCV % Recoveries EPA 1631E (77-123%) PASS FAIL
 Comments: _____
10. Do all calibration points pass acceptance criteria? YES NO
 Comments: _____
11. Are qualifiers consistent with the data review flowcharts? YES NO N/A
 Comments: _____
12. Explain any items on the failed data report from Element
 Comments: **VARIOUS HIGH SAMPLES, ABOVE CALS. F707327-DUP1, F707328-DUP1 FAILED. HIGH RPD.**
13. Are the individual Preparation Blanks < PQL or <2.2xMDL for WI (refer to appropriate prep method PQL list) PASS FAIL
- (a) If not < PQL or <2.2xMDL for WI, note which PB(s) are above control limit; YES NO
- (b) Is the mean PB < PQL or <2.2xMDL for WI (for appropriate qualification)? YES NO
- (c) Was a BrCI Blank analyzed for each preservation level? YES NO N/A
- (d) Are Preparation Blanks summarized on QC page? YES NO
14. Filtration Blank Prepared (if yes, use FB qualifier) YES NO
- (a) Filtration Blank prep date same as associated samples' prep date YES NO N/A
- (b) Filtration Blank absolute value < PQL or <2.2xMDL for WI YES NO N/A
15. IBLs (3 minimum) individually < 0.50 ng/L, mean < 0.25 ng/L and STD of 0.10 ng/L? PASS FAIL
 Comments: _____
16. CCBs individually < 0.50 ng/L or 2.2 x MDL for WI? PASS FAIL
 Comments: _____
17. Have Total Solids been applied? (If NO, please ensure that they are done or nearly done) YES NO N/A
18. Is the correct 'Source' designated for MD/MS/MSD? YES NO
19. For digested preps: was there a spike witness signature & date on the prep bench sheet? YES NO N/A

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 6/30/2017 9:50:00 AM . The samples were received intact, on-ice within a sealed cooler at -33.8 degrees Celsius.

The sample ID for 1706937-09 was corrected by the client as the chain of custody was incorrect.

SAMPLE PREPARATION AND ANALYSIS

Tissue samples were homogenized per work instructions EFSR-P-SP-WI11642 (eff date 11/23/16) prior to digestion.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B (EFGS SOP2822).

Samples were prepped in two batches; F707329 and F707330. They were analyzed in sequence 7G18008. Per client request, sample 1706937-02 was used as the source QC for the Matrix Spike (MS) and Matrix Spike Duplicate (MSD) in batch F707330.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- QR-08 The RPD value for the MS/MSD was outside of acceptance limits. Batch QC acceptable based on matrix duplicate and/or LCS/LCSD RPD values within control limits.
- QR-07 The RPD/RSD value for the matrix duplicate/triplicate was outside of acceptance limits. Batch QC acceptable based on MS/MSD and/or LCS/LCSD RPD values within control limits.
- J The result is an estimated concentration.
- E-01 Sample was preceded by a sample exceeding the calibration curve and was reanalyzed for confirmation.
- E The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
- AS This MS and/or MSD is an analytical spike and/or an analytical spike duplicate.
- AD This matrix duplicate is an analytical duplicate.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 6/30/2017 9:50:00 AM . The samples were received intact, on-ice within a sealed cooler at -33.8 degrees Celsius.

SAMPLE PREPARATION AND ANALYSIS

Tissue samples were homogenized per work instructions EFSR-P-SP-WI11642 (eff date 11/23/16) prior to digestion.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B (EFGS SOP2822).

Samples were prepped in two batches; F707330 and F707331. They were analyzed in sequences 7G18008 and 7G19019. Per client request, sample 1706939-04 was used as the source QC for the Matrix Spike (MS) and Matrix Spike Duplicate (MSD) in batch F707331.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- QR-08 The RPD value for the MS/MSD was outside of acceptance limits. Batch QC acceptable based on matrix duplicate and/or LCS/LCSD RPD values within control limits.
- QR-07 The RPD/RSD value for the matrix duplicate/triplicate was outside of acceptance limits. Batch QC acceptable based on MS/MSD and/or LCS/LCSD RPD values within control limits.
- J The result is an estimated concentration.
- FB This blank is a filtration blank. Data is reported for informational purposes only.
- E-01 Sample was preceded by a sample exceeding the calibration curve and was reanalyzed for confirmation.
- E The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate (CLP E-flag).
- AS This MS and/or MSD is an analytical spike and/or an analytical spike duplicate.
- AD This matrix duplicate is an analytical duplicate.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

- 5b. Has the B/C section data been uploaded? YES NO N/A
- QA/QC Data Checked**
6. RSD CF (≤ 15%) PASS FAIL
 Comments: _____
7. The calibration curve included a minimum of 5 Standards YES NO
 Comments: _____
8. 1st Calibration Standard % Recoveries EPA 1631E (75-125%) PASS FAIL
9. ICV and CCV % Recoveries EPA 1631E (77-123%) PASS FAIL
 Comments: _____
10. Do all calibration points pass acceptance criteria? YES NO
 Comments: _____
11. Are qualifiers consistent with the data review flowcharts? YES NO N/A
 Comments: _____
12. Explain any items on the failed data report from Element
 Comments: Samples off curve, Failing DUPs, Failing MS/MSD RPD and Failing CCV
13. Are the individual Preparation Blanks < PQL or <2.2xMDL for WI (refer to appropriate prep method PQL list) PASS FAIL
 (a) If not < PQL or <2.2xMDL for WI, note which PB(s) are above control limit:
 (b) Is the mean PB < PQL or <2.2xMDL for WI (for appropriate qualification)? YES NO
 (c) Was a BrCl Blank analyzed for each preservation level? YES NO N/A
 (d) Are Preparation Blanks summarized on QC page? YES NO
14. Filtration Blank Prepared (if yes, use FB qualifier) YES NO
 (a) Filtration Blank prep date same as associated samples' prep date YES NO N/A
 (b) Filtration Blank absolute value < PQL or <2.2xMDL for WI YES NO N/A
15. IBLs (3 minimum) individually < 0.50 ng/L, mean < 0.25 ng/L and STD of 0.10 ng/L? PASS FAIL
 Comments: _____
16. CCBs individually < 0.50 ng/L or 2.2 x MDL for WI? PASS FAIL
 Comments: _____
17. Have Total Solids been applied? (If NO, please ensure that they are done or nearly done) YES NO N/A
18. Is the correct 'Source' designated for MD/MS/MSD? YES NO
19. For digested preps: was there a spike witness signature & date on the prep bench sheet? YES NO N/A

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

AMEC Foster Wheeler
271 Mill Road
Chelmsford MA, 01824Project: 2017 Penobscot Biota
Project Number: WO-04A-050
Project Manager: Denise King**Reported:**
13-Nov-17 14:58**REVISED REPORT (11/13/17)**

Report was revised per client request. Client added Methyl Mercury analysis to all samples on 10/18/17.

REVISED REPORT (9/5/17)

Per client's request by email, the sampled time has been updated in the report.

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 8/3/2017 9:40:00 AM . The samples were received intact, on-ice within two sealed coolers at -49.8 and -48.8 degrees Celsius.

Client sent in an updated COC after the samples were received. Both versions of the COC are included in this final report.

SAMPLE PREPARATION AND ANALYSIS

Tissue samples were homogenized per client specific work instructions; EFSR-P-SP-WI11642.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B (EFGS SOP2822).

Samples were prepped in two batches; F708302 and F708459. Sample 1708118-03 was used as the source QC for batch F708459. These were analyzed in sequences 7H10026 and 7H24011.

Samples were prepared and analyzed for methyl mercury by cold vapor gas chromatography atomic fluorescence spectrometry (CV-GC-AFS) in accordance with EPA 1630 (EFGS SOP2808).

Samples were prepped for Methyl Mercury in batch F710421. These were analyzed in two sequences; 7J22009 and 7J24016. Sample 1708118-01 was used as the source QC sample in batch F710421.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

AMEC Foster Wheeler
271 Mill Road
Chelmsford MA, 01824

Project: 2017 Penobscot Biota
Project Number: WO-04A-050
Project Manager: Denise King

Reported:
13-Nov-17 14:58

exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- J The result is an estimated concentration.
- FB This blank is a filtration blank. Data is reported for informational purposes only.
- F-03 This method blank is an equipment blank created during the homogenization process of associated samples at the laboratory. For informational purposes only.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

- 5b. Has the B/C section data been uploaded? YES NO N/A
- QA/QC Data Checked**
6. RSD CF (≤ 15%) PASS FAIL
 Comments: _____
7. The calibration curve included a minimum of 5 Standards YES NO
 Comments: _____
8. 1st Calibration Standard % Recoveries EPA 1631E (75-125%) PASS FAIL
9. ICV and CCV % Recoveries EPA 1631E (77-123%) PASS FAIL
 Comments: _____
10. Do all calibration points pass acceptance criteria? YES NO
 Comments: _____
11. Are qualifiers consistent with the data review flowcharts? YES NO N/A
 Comments: _____
12. Explain any items on the failed data report from Element
 Comments: DUP1 was off curve
13. Are the individual Preparation Blanks < PQL or <2.2xMDL for WI (refer to appropriate prep method PQL list) PASS FAIL
 (a) If not < PQL or <2.2xMDL for WI, note which PB(s) are above control limit:
 (b) Is the mean PB < PQL or <2.2xMDL for WI (for appropriate qualification)? YES NO
 (c) Was a BrCl Blank analyzed for each preservation level? YES NO N/A
 (d) Are Preparation Blanks summarized on QC page? YES NO
14. Filtration Blank Prepared (if yes, use FB qualifier) YES NO
 (a) Filtration Blank prep date same as associated samples' prep date YES NO N/A
 (b) Filtration Blank absolute value < PQL or <2.2xMDL for WI YES NO N/A
15. IBLs (3 minimum) individually < 0.50 ng/L, mean < 0.25 ng/L and STD of 0.10 ng/L? PASS FAIL
 Comments: _____
16. CCBs individually < 0.50 ng/L or 2.2 x MDL for WI? PASS FAIL
 Comments: _____
17. Have Total Solids been applied? (If NO, please ensure that they are done or nearly done) YES NO N/A
18. Is the correct 'Source' designated for MD/MS/MSD? YES NO
19. For digested preps: was there a spike witness signature & date on the prep bench sheet? YES NO N/A

- 5b. Has the B/C section data been uploaded? YES NO N/A
- QA/QC Data Checked**
6. RSD CF (≤ 15%) PASS FAIL
 Comments: _____
7. The calibration curve included a minimum of 5 Standards YES NO
 Comments: _____
8. 1st Calibration Standard % Recoveries EPA 1631E (75-125%) PASS FAIL
9. ICV and CCV % Recoveries EPA 1631E (77-123%) PASS FAIL
 Comments: _____
10. Do all calibration points pass acceptance criteria? YES NO
 Comments: _____
11. Are qualifiers consistent with the data review flowcharts? YES NO N/A
 Comments: _____
12. Explain any items on the failed data report from Element
 Comments: 1707810-23, 27 HIGH SAMPLES. ABOVE CAL5
13. Are the individual Preparation Blanks < PQL or <2.2xMDL for WI (refer to appropriate prep method PQL list) PASS FAIL
 (a) If not < PQL or <2.2xMDL for WI, note which PB(s) are above control limit:
 (b) Is the mean PB < PQL or <2.2xMDL for WI (for appropriate qualification)? YES NO
 (c) Was a BrCl Blank analyzed for each preservation level? YES NO N/A
 (d) Are Preparation Blanks summarized on QC page? YES NO
14. Filtration Blank Prepared (if yes, use FB qualifier) YES NO
 (a) Filtration Blank prep date same as associated samples' prep date YES NO N/A
 (b) Filtration Blank absolute value < PQL or <2.2xMDL for WI YES NO N/A
15. IBLs (3 minimum) individually < 0.50 ng/L, mean < 0.25 ng/L and STD of 0.10 ng/L? PASS FAIL
 Comments: _____
16. CCBs individually < 0.50 ng/L or 2.2 x MDL for WI? PASS FAIL
 Comments: _____
17. Have Total Solids been applied? (If NO, please ensure that they are done or nearly done) YES NO N/A
18. Is the correct 'Source' designated for MD/MS/MSD? YES NO
19. For digested preps: was there a spike witness signature & date on the prep bench sheet? YES NO N/A

29. Are re-runs noted with reason? YES NO N/A
- Comments: _____
30. For failing QC (CCV, CCB, PB, BS/BSD, CAL): YES NO N/A
- Was a bubbler and trap test run before the analytical run continued?
 Comments: _____
31. Do re-run results compare to initial analysis (< 35% RPD)? YES NO N/A
- Comments: _____
32. Are qualifiers consistent with the data review flowcharts? YES NO N/A
- Comments: _____
33. Have non-reportable samples been imported into LIMS and clicked to non-reportable? YES NO N/A
- Comments: _____
34. Have re-extracts been created for non-reportable samples? YES NO N/A
35. Narrations in MMO box in LIMS?
 Comments: _____
36. Are there any HIGH QA projects within the data? YES NO
 If so, place dataset to the QA office.
37. Does the data set need scanning? YES N/A
- Files located at: \\Cuprum\gen_admin\Quality Assurance\Training Master\DOCs
38. Date of analyst IDOC/CDOC: 6/13/2017 IDOC/CDOC within last 12 months? YES NO
39. Date of analyst's SOP reading: 5/23/2016 Current SOP revision? YES NO
40. Date of LOD: 4/24/17, 5/8/17 LOD within last 3 months (within 12 months for MDN)? YES NO N/A
41. Date of LOQ: 4/24/17, 5/8/17 LOQ within last 3 months (within 12 months for MDN)? YES NO N/A
42. If MDN samples, date of last MDL study: _____
43. MDL study within last 12 months? YES NO N/A
- Data can not be reported without a current IDOC/CDOC, LOD or LOQ.**
- Additional Comments: YES NO

REVISED REPORT 9/5/17

Per client's request via email, a revised report to include updated bench sheet with corrected masses was generated.

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 8/3/2017 9:40:00 AM. The samples were received intact, on-ice within two sealed coolers at -49.8 and -48.8 degrees Celsius.

SAMPLE PREPARATION AND ANALYSIS

Tissue samples were homogenized per client specific work instructions; EFSR-P-SP-WI11642.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B (EFGS SOP2822).

Samples were prepped in two batches; F708299 and F708455. Sample 1708119-01 was used as the source QC in batch F708299 and sample 1708119-06 was used as the source QC in batch F708455. These were analyzed in sequences 7H10019 and 7H25009.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- J The result is an estimated concentration.
- F-03 This method blank is an equipment blank created during the homogenization process of associated samples at the laboratory. For informational purposes only.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

REVISED REPORT (11/13/17)

Report was revised per client request. Client added Methyl Mercury analysis to all samples on 10/18/17.

SAMPLE RECEIPT

Samples were received at Eurofins Frontier Global Sciences (EFGS) on 8/8/2017 9:30:00 AM . The samples were received intact, on-ice within a sealed cooler at -43 degrees Celsius.

SAMPLE PREPARATION AND ANALYSIS

Tissue samples were homogenized per client specific work instructions; EFSR-P-SP-WI11642.

Total mercury preparation and analysis was performed by flow injection atomic fluorescence spectrometry (FI-AFS) in accordance with EPA 1631B (EFGS SOP2822).

Samples prepped in batch F708455 and analyzed in sequence 7H25009. Samples 1708240-10 and 1708240-15 were used as the source QC in batch F708455 per client request.

Samples were prepared and analyzed for methyl mercury by cold vapor gas chromatography atomic fluorescence spectrometry (CV-GC-AFS) in accordance with EPA 1630 (EFGS SOP2808).

Samples were prepped for Methyl Mercury in batches F710421 and F710422. These were analyzed in two sequences; 7J22009 and 7J24016. Samples 1708240-10 and 1708240-15 were used as the source QC sample in batch F710422.

ANALYTICAL AND QUALITY CONTROL ISSUES

Method blanks were prepared for every preparation to assess possible blank contribution from the sample preparation procedure. The method blanks were carried through the entire analytical procedure. All blanks fell within the established acceptance criteria with the exception of any items narrated above or flagged and described in the notes and definitions section of the report.

Liquid spikes, certified reference material (CRM) or a quality control samples (QCS) were prepared for every preparation as a measure of accuracy. All liquid spikes, CRMs and/or QCS samples fell within the established acceptance criteria with the exception of any items

Eurofins Frontier Global Sciences, Inc.

The results in this report only apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Amy Goodall, Project Manager

AMEC Foster Wheeler
271 Mill Road
Chelmsford MA, 01824

Project: 2017 Penobscot Biota
Project Number: WO-04A-050
Project Manager: Denise King

Reported:
13-Nov-17 15:11

narrated above or flagged and described in the notes and definitions section of the report.

As an additional measure of the accuracy of the methods used and to check for matrix interference, matrix spikes (MS) and matrix spike duplicates (MSD) were digested and analyzed. All of the matrix spike recoveries fell within the established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

A reasonable measure of the precision of the analytical methods is the relative percent difference (RPD) between a matrix spike recovery and a matrix spike duplicate recovery and between laboratory control sample recovery and laboratory control sample duplicate recoveries. All of the relative percent differences established acceptance criteria with the exception of any items flagged and described in the notes and definitions section of the report.

Project: 2017 Penobscot Biota
Project Number: WO-04A-050
Project Manager: Denise King

Reported:
13-Nov-17 15:11

Notes and Definitions

- U Analyte was not detected and is reported as less than the LOD or as defined by the client. The LOD has been adjusted for any dilution or concentration of the sample.
- J The result is an estimated concentration.
- FB This blank is a filtration blank. Data is reported for informational purposes only.
- F-03 This method blank is an equipment blank created during the homogenization process of associated samples at the laboratory. For informational purposes only.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

|---|---|--|--|
| 1. Compare SampleID with Benchsheet/Sequence/Raw Data (Have all samples been imported?) | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| 2. Check for transcription errors from Excel spreadsheet (or Prep Benchsheet)/Raw data | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (a) On raw data (instrument print-out), does correct file (dataset ID#) name appear in description?
Naming convention: THg26001-yymmdd-1 or THg26002-yymmdd-1 | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (b) Check 5% of transcription from Instrument print-out and Excel file
Compare the "Dilute" and "Peak (raw)" columns to "Dilution" and "Uncorrected Result" in Excel | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (c) Check standards & reagents in sequence & bench sheet for correct usage (expiries). | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| (d) Check and compare masses (review prep benchsheet) | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| (e) Check & compare initial & final volumes | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| (f) Do aliquots and dilutions written on benchsheet match those in Excel?
50 ml / aliquot = Excel dilution value | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input type="checkbox"/> N/A <input checked="" type="checkbox"/> |
| (g) Is the sequence #, analyst, date, and instrument # on the QC page? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (h) Is the analysis status correct? (analyzed/initial review/reviewed) | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (i) Original prep bench sheet added to data package? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (j) Benchsheet prep date MUST match actual prep date (check if re-shot vs re-extract) | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| 3. High QA? WO#(s)/Client(s): _____ | <input type="checkbox"/> YES | <input checked="" type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| 4. Client specific QC? (if Yes, refer to Project Notes/LIMS) | <input type="checkbox"/> YES | <input checked="" type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (a) Have the QC requirements been met for all WO#s? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (b) Prep blanks corrections/assigned properly | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| 5a. 20 or fewer samples in batch? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (i) 3 PBs, 1 LCS(or BS), 1 LCSD(or BSD), 1 DUP/Batch 1 MS/MSD (or AS/ASD)/10 samples? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |
| (ii) 1 CCV and 1 CCB every 10 analytical runs? | <input checked="" type="checkbox"/> YES | <input type="checkbox"/> NO | <input checked="" type="checkbox"/> |

- 5b. Has the B/C section data been uploaded? YES NO N/A
- QA/QC Data Checked**
6. RSD CF ($\leq 15\%$) PASS FAIL
 Comments: _____
7. The calibration curve included a minimum of 5 Standards YES NO
 Comments: _____
8. 1st Calibration Standard % Recoveries EPA 1631E (75-125%) PASS FAIL
9. ICV and CCV % Recoveries EPA 1631E (77-123%) PASS FAIL
 Comments: _____
10. Do all calibration points pass acceptance criteria? YES NO
 Comments: _____
11. Are qualifiers consistent with the data review flowcharts? YES NO N/A
 Comments: _____
12. Explain any items on the failed data report from Element
 Comments: NONE
13. Are the individual Preparation Blanks < PQL or <2.2xMDL for WI (refer to appropriate prep method PQL list) PASS FAIL
 (a) If not < PQL or <2.2xMDL for WI, note which PB(s) are above control limit: _____
 (b) Is the mean PB < PQL or <2.2xMDL for WI (for appropriate qualification)? YES NO
 (c) Was a BrCl Blank analyzed for each preservation level? YES NO N/A
 (d) Are Preparation Blanks summarized on QC page? YES NO
14. Filtration Blank Prepared (if yes, use FB qualifier) YES NO
 (a) Filtration Blank prep date same as associated samples' prep date YES NO N/A
 (b) Filtration Blank absolute value < PQL or <2.2xMDL for WI YES NO N/A
15. IBLs (3 minimum) individually < 0.50 ng/L, mean < 0.25 ng/L and STD of 0.10 ng/L PASS FAIL
 Comments: _____
16. CCBs individually < 0.50 ng/L or 2.2 x MDL for WI? PASS FAIL
 Comments: _____
17. Have Total Solids been applied? (If NO, please ensure that they are done or nearly done) YES NO N/A
18. Is the correct 'Source' designated for MD/MS/MSD? YES NO
19. For digested preps: was there a spike witness signature & date on the prep bench sheet? YES NO N/A

29. Are re-runs noted with reason? YES NO N/A
- Comments: _____
30. For failing QC (CCV, CCB, PB, BS/BSD, CAL): YES NO N/A
- Was a bubbler and trap test run before the analytical run continued?
 Comments: _____
31. Do re-run results compare to initial analysis (< 35% RPD)? YES NO N/A
- Comments: _____
32. Are qualifiers consistent with the data review flowcharts? YES NO N/A
- Comments: _____
33. Have non-reportable samples been imported into LIMS and clicked to non-reportable? YES NO N/A
- Comments: _____
34. Have re-extracts been created for non-reportable samples? YES NO N/A
35. Narrations in MMO box in LIMS?
 Comments: _____
36. Are there any HIGH QA projects within the data? YES NO
 If so, place dataset to the QA office.
37. Does the data set need scanning? YES N/A
- Files located at: \\Cuprum\gen_admin\Quality Assurance\Training Master\DOCs
38. Date of analyst IDOC/CDOC: 6/13/2017 IDOC/CDOC within last 12 months? YES NO
39. Date of analyst's SOP reading: 5/23/2016 Current SOP revision? YES NO
40. Date of LOD: 4/24/17, 5/8/17 LOD within last 3 months (within 12 months for MDN)? YES NO N/A
41. Date of LOQ: 4/24/17, 5/8/17 LOQ within last 3 months (within 12 months for MDN)? YES NO N/A
42. If MDN samples, date of last MDL study: _____
43. MDL study within last 12 months? YES NO N/A

Data can not be reported without a current IDOC/CDOC, LOD or LOQ.

- Additional Comments: YES NO

Technician: WF Batch#: F710422 Date: 10/19/17

- EFAFS-T-AFS-SOP2986 Tissues - Methyl Mercury - KOH/Methanol: Hot plate 75±5°C for 2-4 hours.
- EFAFS-T-AFS-SOP2795 Tissues - Total Mercury - 70:30: Hot plate 75±5°C for two hours.
- EFAFS-T-AFS-SOP5134 Sediments - Methyl Mercury - KBr/CH₂Cl₂: Heat Block 45°C (nitrogen purge for 30 minutes).
- EFAFS-T-AFS-SOP2807 Solids - Total Mercury - Cold AR: 18-25°C for over four hours.

Other: _____ Vial Type: Glass Teflon
 Balance#: 6,19105244 Calibrated? Yes No Therm.#: 13698 Calibrated? Yes No

*Time in: 19:15 Actual Temp. (raw): 76.0 °C w/ CF: 76.0 °C
 Time out: 22:15 Actual Temp. (raw): Times °C w/ CF: Timer °C
 *Time in can't begin before target temperature is reached

29. Are re-runs noted with reason? YES NO N/A
 Comments: _____
30. For failing QC (CCV, CCB, PB, BS/BSD, CAL): YES NO N/A
 Was a bubbler and trap test run before the analytical run continued?
 Comments: _____
31. Do re-run results compare to initial analysis (< 35% RPD)? YES NO N/A
 Comments: _____
32. Are qualifiers consistent with the data review flowcharts? YES NO N/A
 Comments: _____
33. Have non-reportable samples been imported into LIMS and clicked to non-reportable? YES NO N/A
 Comments: _____
34. Have re-extracts been created for non-reportable samples? YES NO N/A
35. Narrations in MMO box in LIMS?
 Comments: _____
36. Are there any HIGH QA projects within the data? YES NO
 If so, place dataset to the QA office.
37. Does the data set need scanning? YES N/A
- Files located at: \\Cuprum\gen admin\Quality Assurance\Training Master\DOCs
38. Date of analyst IDOC/CDOC: 6/13/2017 IDOC/CDOC within last 12 months? YES NO
39. Date of analyst's SOP reading: 2/9/2017 Current SOP revision? YES NO
40. Date of LOD: 4/24/2017 LOD within last 3 months (within 12 months for MDN)? YES NO N/A
41. Date of LOQ: 4/24/2017 LOQ within last 3 months (within 12 months for MDN)? YES NO N/A
42. If MDN samples, date of last MDL study: _____
43. MDL study within last 12 months? YES NO N/A
- Data can not be reported without a current IDOC/CDOC, LOD or LOQ.**
- Additional Comments: YES NO
